Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/20/05 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 22, 37-45, 55-81 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franz et al (US 6,541,676 B1).

Franz discloses to form alloys of platinum, palladium, nickel, ruthenium, rhodium, gold (col.5, lines 42-44) for a free standing flexible member 17 of a microelectromechanical device. Franz does not explicitly disclose the specific alloy combinations and percentages, however it would have been obvious to choose them since Franz discloses that they are useful materials to form alloys from. In addition, since they are used for the same purpose as in the instant invention, as free-standing members, it is obvious to form them to the cited percentages, which inherently then have the cited properties since they are the same composition, in order to achieve materials that are capable of being free-standing.

Allowable Subject Matter

Claims 24, 30 and 46-54 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art does not disclose or suggest a micromechanical device comprising at least one freestanding flexible member formed from an alloy, where the alloy comprises platinum and alloying element iridium, wherein the alloying element has an equilibrium solid solubility of at least 1 wt.% in the platinum, and wherein the alloying element is present in an amount that does not result in precipitates, as in the context of claim 46.

The closest prior art, Franz, discloses a variety of metal alloys, but does not suggest a platinum-iridium alloy, as in the context of claim 46.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Amendment

The allowance over the prior art of claims 12-21, 28 is withdrawn in view of newly cited Franz. The claims are now rejected over newly cited Franz. Franz discloses free-standing metal alloys for micromechanical devices. The 102 rejections over Golecki are withdrawn in view of the claim amendment canceling the gold and nickel alloy.
